Python for everyone -- EXAMPLE
Part I: Multiple choice

1. Given the string `s="Exam!"`, which are correct ways to access the letter 'x'? Mark all correct answers.

A) `s[2]`

B) `s[s.index('x')]`

C) `s[-4]`

D) `s[0]`

2. What does the following code print out?

```
weather = [
     {'day':'2025/12/03', 'min_temp' : 4., 'max_temp' : 12.},
     {'day':'2025/12/04', 'min_temp' : 3., 'max_temp' : 9. }
     ]

print(weather[1]['day'][:4])
```

A) 4.0

B) 2025

C) 202

D) 'min_'

3. We define the following function:

```
def add3(x, y, z):
     total = x+y+z
     return total
```

Which of the following ways to call the function is incorrect (throws an error)?

A) `add3(1,2,3.3)`

B) `add3(y=1,x=2,z=12)`

C) `add3(y=1,4,8)`

D) `add3(1,z=12,y=9)`

4. Which of the following strings provide relative file paths? Mark all correct answers.

A) `"example.csv"`

B) `"../dogs.txt"`

C) `"/home/posfaim/teaching/data.csv"`

D) `r"C:\data\big_data.xls"`

5. What is the output of the following code?

```
L = []
for i in range(3):
    L.append(2*i)
    print(L[-1])
```

A) 0
2
4

B) [0, 2, 4]

C) [0, 2, 4, 6]

D) [0]
[0, 2]
[0, 2, 4]

6. Which of the following lines open a text file for writing or appending? Mark all correct answers.

A) `with open("stuff.txt", 'wt'):`

B) `with open("minesweeper.exe", 'w'):`

C) `with open("stuff.csv", 'r'):`

D) `with open("hidegkut.txt", 'a'):`

7. You estimated the weight of the Giza pyramid to be 5.8 million metric tons. What is the best choice for the variable name?

A) 

B) `PyramidWeight`

C) `pyramid_weight`

D) `pyramid_weight_5.8`

8. Which data types can be used as keys in a dictionary? Mark all correct answers.

A) list

B) tuple

C) integer

D) string

9. Which of the following expressions evaluate to an integer? Mark all correct answers.

A) `1-13`

B) `12*4`

C) `12.0*4`

D) `[12]*3`

10. Your friend wrote the following code to find the minimum number in a list. But it keeps printing out zero, which line do you need to fix?

```
nums = [12, 3, 8, 6]

m = 0
for num in nums:
     if m > num:
          m = num
print(m)
```

A) `m = 0`

B) `for num in nums:`

C) `     if m > num:`

D) `          m = num`
